

TEST CASES AND BUGS

OrangeHRM QA Assignment Manual Testing Deliverable

Application Under Test: OrangeHRM Demo (<https://opensource-demo.orangehrmlive.com/web/index.php/auth/login>) **Valid Credentials (from login page):**
Username: Admin | Password: admin123

Task 1: Login Functionality — Test Cases

Test Case ID	Test Scenario	Test Steps	Test Data	Expected Result	Actual Result	Status
TC_L OGI N_0 1	Verify successful login with valid credentials	1. Navigate to login URL 2. Enter username 3. Enter password 4. Click "Login"	Username: Admin, Password: admin123	User is redirected to the Dashboard page; "Dashboard" header is visible	As Expected	Pass
TC_L OGI N_0 2	Verify login fails with invalid password	1. Navigate to login URL 2. Enter valid username 3. Enter incorrect password 4. Click "Login"	Username: Admin, Password: wrongpass1	Error message "Invalid credentials" is displayed; user remains on login page	As Expected	Pass
TC_L OGI N_0 3	Verify login fails with invalid username	1. Navigate to login URL 2. Enter incorrect username 3. Enter valid password 4. Click "Login"	Username: WrongAdmin, Password: admin123	Error message "Invalid credentials" is displayed; user remains on login page	As Expected	Pass
TC_L OGI	Verify validation	1. Navigate to login URL	Username: "",	Inline "Required" validation	As Expected	Pass

Test Case ID	Test Scenario	Test Steps	Test Data	Expected Result	Actual Result	Status
N_04	on empty username and password	2. Leave both fields blank 3. Click "Login"	Password: ""	messages appear under both fields; no API call is triggered		
TC_LOGI_N_05	Verify validation when only password is entered	1. Navigate to login URL 2. Leave username blank 3. Enter password 4. Click "Login"	Username: "", Password: admin123	Inline "Required" message appears under the username field	As Expected	Pass
TC_LOGI_N_06	Verify system handles SQL Injection attempt safely	1. Navigate to login URL 2. Enter SQL injection string in username 3. Enter any password 4. Click "Login"	Username: ' OR '1'='1, Password: ' OR '1'='1	Login is rejected with a generic "Invalid credentials" message; no database error, stack trace, or unauthorized access occurs	As Expected	Pass
TC_LOGI_N_07	Verify username field is case-sensitive	1. Navigate to login URL 2. Enter username in different case 3. Enter valid password 4. Click "Login"	Username: admin (lowercase), Password: admin123	Behavior should be explicitly defined (either logs in or rejects consistently); OrangeHRM currently treats username as case-sensitive and rejects admin	Login was rejected with "Invalid credentials" though Admin (capital A) is the only valid form — inconsistent capitalization is not normalized or clearly	Fail

Test Case ID	Test Scenario	Test Steps	Test Data	Expected Result	Actual Result	Status
					communicated to the user	
TC_LOGIN_08	Verify password field masks input and login option persists across attempts	1. Navigate to login URL 2. Type into the password field 3. Observe field rendering 4. Submit an incorrect password 3 times in a row	Password: any string, entered 3x incorrectly	Characters are masked (dots/asterisks) at all times; after multiple failed attempts, either a generic error persists or rate-limiting/CAPTCHA is triggered per security policy	Password field correctly masks input, but there is no rate-limiting, CAPTCHA, or account lockout after repeated failed attempts, allowing unlimited brute-force attempts	Fail

Additional edge-case scenarios covered conceptually (not required in the 8 above, listed for completeness):

- Leading/trailing whitespace in username (e.g., " Admin ")
- Extremely long input strings (500+ characters) in username/password fields
- Special characters and Unicode/emoji in credential fields
- Browser back-button behavior after successful login (session should not allow re-submission to login page while authenticated)
- Session timeout / expired session redirect behavior
- Login with credentials copy-pasted with trailing newline characters

Task 1: Three Potential Bugs / Usability Issues

Bug ID	Description	Severity	Steps to Reproduce
BUG_01	No account lockout or CAPTCHA mechanism after repeated failed login attempts, exposing the application to brute-force credential attacks.	Critical	1. Navigate to the login page. 2. Enter a valid username with an incorrect password. 3. Submit repeatedly (10+ times) in quick succession. 4. Observe that the system never locks the account, introduces a delay, or presents a CAPTCHA challenge.
BUG_02	The "Forgot Password?" flow does not clearly indicate what happens for a non-existent username (no confirmation message shown either way), which is a usability/security-transparency gap — it's unclear if this is intentional (to prevent username enumeration) or a missing UI state.	Major	1. Click "Forgot your password?" on the login page. 2. Enter a username that does not exist in the system. 3. Submit the form. 4. Observe the resulting message is generic and does not confirm whether an email was actually sent or a matching account was found, with no guidance for the user on next steps.
BUG_03	Error message on failed login ("Invalid credentials") does not specify which field is incorrect and does not persist/highlight which field to correct, creating minor usability friction, especially for users on mobile where the message can be easy to miss above the fold.	Minor	1. Navigate to the login page. 2. Enter a valid username with an incorrect password. 3. Click "Login". 4. Observe the generic error banner appears at the top of the form without visually flagging the specific input field, and the password field is silently cleared without any indication to the user that it was cleared.

Task 2: Employee Management Test Scenarios (View / Update / Delete)

Covers the manual scenarios required for managing newly added employees per the assignment brief.

Test Case ID	Test Scenario	Test Steps	Test Data	Expected Result	Actual Result	Status
TC_E MP_0 1	Verify a newly added employee appears in the Employee List	1. Log in as Admin 2. Navigate to PIM > Add Employee 3. Add employee 4. Navigate to PIM > Employee List 5. Search by employee name	First Name: John, Last Name: Doe	Employee "John Doe" is listed in the Employee List with correct name and auto-generated Employee ID	As Expected	Pass
TC_E MP_0 2	Verify employee details can be viewed	1. Navigate to Employee List 2. Click on an employee's name	Existing employee record	Personal Details page opens showing correct name, employee ID, and other saved fields	As Expected	Pass
TC_E MP_0 3	Verify employee personal details can be updated	1. Open an employee's Personal Details page 2. Edit a field (e.g., mobile number) 3. Click "Save"	Updated mobile number	Success toast/message is shown; updated value persists after page refresh	As Expected	Pass
TC_E MP_0 4	Verify an employee record can be deleted from the Employee List	1. Navigate to Employee List 2. Select the checkbox next to an employee 3. Click "Delete" (trash icon) 4. Confirm deletion in the dialog	Existing employee record	Confirmation dialog appears; after confirming, employee is removed from the list and a success message is shown	As Expected	Pass

Test Case ID	Test Scenario	Test Steps	Test Data	Expected Result	Actual Result	Status
TC_E MP_05	Verify deletion requires explicit confirmation (no accidental deletes)	1. Navigate to Employee List 2. Click "Delete" on a record 3. Click "Cancel" in the confirmation dialog	Existing employee record	Record is NOT deleted; user remains on the Employee List with data intact	As Expected	Pass
TC_E MP_06	Verify bulk delete of multiple employees	1. Navigate to Employee List 2. Select checkboxes for 2+ employees 3. Click "Delete" 4. Confirm	2+ existing employee records	All selected employees are removed in a single action; list refreshes and count updates	As Expected	Pass
TC_E MP_07	Verify search/filter on Employee List returns correct results	1. Navigate to Employee List 2. Enter employee name in the "Employee Name" search field 3. Click "Search"	Name of a previously added employee	Only matching employee(s) are displayed; result count reflects the filter	As Expected	Pass
TC_E MP_08	Verify pagination works correctly when employee list spans multiple pages	1. Navigate to Employee List with 50+ records 2. Scroll to pagination controls 3. Click "Next" / page number	Employee List with multiple pages	Page navigates correctly; records shown update accordingly; no duplicate or missing rows across pages	As Expected	Pass

Task 2 (assignment brief): Basic Manual Test Script for Login

1. Open browser, navigate to `https://opensource-demo.orangehrmlive.com/web/index.php/auth/login`.
2. Confirm the login form renders with Username, Password, and "Login" button.
3. Enter `Admin / admin123` and click "Login".
4. Confirm redirect to `/web/index.php/dashboard/index` and the "Dashboard" heading is visible.
5. Click the user dropdown (top-right) > "Logout".
6. Confirm redirect back to the login page and that browser back navigation does not restore the authenticated session.

(The automated equivalent of this script is implemented in `tests/test_orangehrm_workflow.py`, see the automation deliverable.)
